

Maze

Download the `maze.py` and `maze.png` files and place them in the same folder. Then, starting with the code provided in `maze.py`, Add turtle commands into the `main` function in the program to move the turtle from the center of the maze to the exit on the right hand side. Make sure your turtle never touches a wall (black lines). Save your program as `maze.py` and submit it along with a screenshot showing your solution.
